MEMBERSHIP in the American Genetic Association is not a prerequisite for publication in the Journal of Heredity. All papers will be critically read by at least one member of the editorial board and will be judged on the basis of original data, interpretation or review. Acceptance will depend on scientific merit and suitability for the Journal. Papers should be submitted solely to the Journal of Heredity; reprinting and translation are not allowed without the consent of the editor. Approximately six months should be allowed for publication. Although an arbitrary page-limit is not in effect, lengthy papers are discouraged and will be accepted only in cases of exceptional merit. A manuscript should be submitted in two typewritten copies (original and one carbon) that are double-spaced throughout. Footnotes, tables, legends and literature citations should each be placed on a separate sheet.

**Style**

A manuscript should conform to the general format of issues published since January 1966. It should include a summary, figure legends (if applicable), and literature citations arranged in alphabetical order. All literature citations should be cited in the text either by author and number or by number alone. In the case of multiple authors, all names should be included, and full titles and inclusive pages should be given.

The title should tersely inform the reader of the subject of the paper, and the organism to which it relates; it should contain no more than 75 characters and spaces in the main head; a subhead can be used when greater length is unavoidable.

A footnote on page 1 should give the author's title, affiliation and address, and acknowledgements. A concise and factual summary should be provided, preferably in one paragraph, that is complete without reference to the text.

Footnotes to the text are not desirable, and should be avoided if possible. Purely descriptive material should be parenthetically included in the text.

Abbreviations and symbols should be defined or identified upon their initial appearance in the text.

Genetic nomenclature for all organisms should follow as closely as possible the rules proposed by the Committee on Standardized Genetic Nomenclature for Mice (J. Hered. 54:159-162. 1963.)

In manuscripts that include tables and/or illustrations, each should be referred to in the text.

**Tables and illustrations**

Each table should be submitted on a sheet separate from the text, and should be numbered by Roman numerals and should include a title. Tables should be planned to fit either a single column (3½ inches) or a double column (6½ inches). Accuracy in mathematical data is essential; check all calculations and formulae with special care. The equivalent of one printed page of tabular material is allowed without charge. Additional pages will be prorated at $40 per page.

Line and half-tone reproduction: Illustrations should be planned to fit one-column width (3½ inches) or double-column width (6½ inches). All or part of the height of the type page (8½ inches) may be used, but space should be allowed for legends. Drawings should be submitted in a form suitable for line offset reproduction. Pen and India-ink drawings are preferred and should be prepared on heavy paper or on coordinate blue-lined paper. Coordinate green-lined paper should not be used. Drawings that are carelessly rendered or are otherwise inexpertly and inadequately prepared will not be accepted for publication. Descriptive material should not be included on the drawing, but should be contained in a separate legend. For half-tone offset reproduction, original photographs that are unlettered and unmounted should be submitted in the form of clear black-and-white prints on glossy paper. Each figure should be identified with the name of the author, article and figure number. Care should be taken to see that they cannot be folded or bent in transit and paper clips should not be used.

Color reproduction: A full-color plate illustrating a featured article will be used on the cover of each issue. The cover is available to any contributor whose manuscript, with good color material, is accepted for publication provided he can assume half the cost of reproduction. A color cover costs approximately $550, of which the Journal is prepared to pay half ($275). The cost of color text-plates is approximately $225 per page. Additional information about color reproduction can be obtained by writing to the editor.

**Page charges, proofs, and reprints**

A charge of $50 per page, including illustrations and tables, will be made for all papers published. This charge is in accordance with the policy of U.S. federal granting agencies, which state that: 1) Payment of page charges is not a condition for acceptance of a paper; 2) charges are equitably applied to all research papers regardless of the source of financial support; 3) research papers report work that was supported by the grant being charged; 4) the journal is not operated for profit. In cases where funds are not available to meet publication charges, the author should submit a statement to the editor at the time the paper is submitted, specifying the reasons for lack of funds. All statements requesting waiver of the publication charge, due to lack of funds, will be considered by the executive committee. No paper accepted for publication by the editorial board will be rejected because of the lack of funds.

A form will be sent with galley proof showing anticipated page charges and a reprint price schedule. The bill for all charges and reprints will be sent after publication of the paper.

Authors will receive galley proofs, which should be returned to the editor within three days after receipt. A reprint order should be returned with corrected proofs. Page proofs will not be sent to authors unless specifically requested.

**Manuscripts and correspondence**

All matters relating to publication should be addressed to the Managing Editor, Mrs. B. C. Kuhn, 1028 Connecticut Ave., N.W., Washington, D. C. 20036.
The American Breeders Association—the forerunner of the American Genetic Association—was established in 1903; in 1914 it was reorganized, incorporated and reestablished as the American Genetic Association, and thus became the first organization in the world whose purposes were devoted entirely to "promoting a knowledge of the laws of heredity." The official publication of the Association is the bimonthly *Journal of Heredity*, which features articles from many leading authorities in this important science of life and development. These reports and interpretations are an excellent source of genetic information to scientists, students, and laymen who are interested in current techniques and advances.

Membership in the American Genetic Association, which includes a subscription to the *Journal of Heredity*, imposes no burdensome obligations. Although members are encouraged to lend support to the objectives of the Association by contributing papers describing their research results for publication in the *Journal*, membership is not a prerequisite for publication. All papers received for publication are given careful consideration by the editorial board, and should conform to the general usage of issues published since January, 1966. Specific instructions for contributors are published frequently in the *Journal* and should be consulted by authors who have not previously published in the *Journal*.

Subject to the approval of the Council, all persons actively interested in any aspect of the science of genetics are eligible for membership. Annual dues, which include a subscription to the *Journal of Heredity* and the right to attend all meetings, are $14 within the United States; $14.25 in Canada; and $15 in all other foreign countries. Student membership is $7 annually (foreign postage extra); life membership is $175. Subscription to the *Journal of Heredity* is $20 annually (foreign postage extra).

Further information about membership, publication, or any other aspect of the Association may be obtained by writing to the Secretary at the address below.
